## Summary

Full-Stack Software Engineer with expertise in developing scalable web applications and services. Proficient in Python, C++, and JavaScript, and modern frameworks including React.js and Node.js. Demonstrated success in building maintainable, testable code with emphasis on performance optimization, debugging, and quality assurance. Experienced in collaborative development, code reviews, and delivering customer-focused solutions.

## Education

### Indiana University Bloomington

MS in Computer Science

Aug 2023 - May 2025

Bloomington, IN

### Pune Institute of Computer Technology

Bachelor's in Computer Engineering, Minors in CyberSecurity

Aug 2019 - May 2023

Pune, India

## Technical Skills

**Programming Languages:** Python, C++, JavaScript, TypeScript, Java, C#, SQL, HTML/CSS, Bash/Shell

**Frameworks & Libraries:** React.js, Node.js, Express.js, Django, Jest, PyTorch, TensorFlow

**Testing & Quality Assurance:** Jest, Unit Testing, Integration Testing, Code Reviews, Debugging Tools, Performance Profiling

**Databases:** PostgreSQL, MySQL, SQLite, MongoDB, Redis, Elasticsearch

**Tools & Platforms:** Git, GitHub, Docker, Kubernetes, AWS (EC2, Lambda, S3), CI/CD Pipelines, Visual Studio, Postman

## Experience

### Software Developer

Indiana University Bloomington

Jun 2025 - Present

USA

- Developing a full-stack event discovery application with **React.js frontend** and **Node.js/Express backend**, implementing 5 key features including interactive mapping and location-based recommendations, serving **40,000+ university students**.
- Implemented comprehensive **testing strategy** including unit tests with **Jest** and user acceptance testing with 20+ peers, incorporating feedback that enhanced UX and **reduced navigation time by 40%**.
- Optimized application performance through **code profiling** and efficient data loading techniques, **reducing API calls by 60%** and implementing **caching strategies** that improved response times and user engagement.
- Collaborated with cross-functional team using **Git workflows**, conducted **code reviews**, and followed **secure coding practices** ensuring code quality and maintainability.

### Machine Learning Engineer

Pune Institute of Computer Technology

Jan 2023 - Aug 2023

Pune, India

- Trained a Convolutional Neural Network for weather condition classification, **achieving 88% accuracy** by processing over 5,000 weather images, contributing key findings that improved project outcomes by 30%.
- Implemented **TensorFlow**-based solutions following best practices in machine learning development, enhancing the research team's capabilities.
- Presented** machine learning findings to senior researchers during weekly meetings, translating complex CNN algorithms into actionable insights that influenced subsequent model improvements and enhanced classification accuracy.

## Projects

### AgendaLink | *Python, Node.js, OpenAI GPT, Google APIs*

- Engineered a **RESTful API service** with **Node.js/Express** for automating email management and calendar scheduling, implementing intelligent task routing across **7 distinct intent categories** with **85% accuracy**.
- Integrated **Google Gmail** and **Calendar APIs** with **OAuth 2.0** authentication, implementing **error handling**, **retry logic**, and **security best practices** for production-ready deployment.
- Implemented **comprehensive testing suite** with unit and integration tests, **monitoring telemetry**, and **performance optimization** ensuring end-to-end workflow completes within **15s** with concurrent processing capabilities.

### SportConnect 🏀 | *MERN Stack, Docker, CI/CD*

- Architected a **scalable full-stack web application** using **MERN stack**, implementing secure user authentication, RESTful APIs, and real-time chat functionality following **software engineering best practices**.
- Implemented **CI/CD pipeline** with automated testing, containerized using **Docker**, and established **code quality gates** ensuring consistent deployment environments and reliable releases.
- Developed **responsive frontend** with **React.js**, implemented **debugging tools**, **performance monitoring**, and ensured **accessibility compliance** across devices.

### EventCraft 🎪 | *Python, Tkinter, Pandas*

- Engineered a **Case-Based Reasoning** system for automating logistical planning for events, **reducing planning time by 35%** through historical data adaptation.
- Designed an intuitive **UI** for user interaction, enabling real-time calculations for event planning needs.
- Created a data-driven solution processing **10+ event types**, enhancing efficiency for event planners.
